

Table of Contents

Prefaces

Table of Contents	XI
1. Introduction	1
1.1 Discrete-event Simulation	2
1.1.1 Terminology and Components of Discrete-event Simulation	2
1.1.2 The Principle of Discrete-event Simulation	3
1.1.3 The Event-scheduling Time-advance Algorithm	3
1.1.4 Starting and Stopping of Simulations	5
1.1.5 Types of Simulation Runs	5
1.2 Modeling for Computer Simulation	5
1.2.1 Good Performance Models and Good Simulation Models	6
1.2.2 Good Modeling Practice for Computer Simulation	8
1.2.3 Common Modeling Practice	10

Part I. Tools and Methods for Network Simulation

2. The <i>ns-3</i> Network Simulator	15
2.1 Introduction	15
2.2 Modeling the Network Elements in <i>ns-3</i>	17
2.3 Simulating a Computer Network in <i>ns-3</i>	18
2.4 Smart Pointers in <i>ns-3</i>	22
2.5 Representing Packets in <i>ns-3</i>	23
2.6 Object Aggregation in <i>ns-3</i>	24
2.7 Events in <i>ns-3</i>	26
2.8 Compiling and Running the Simulation	27
2.9 Animating the Simulation	28
2.10 Scalability with Distributed Simulation	29
2.11 Emulation Capabilities	31
2.12 Analyzing the Results	33

3. OMNeT++	35
3.1 Introduction	35
3.1.1 Overview	35
3.1.2 The OMNeT++ Approach for Modeling	35
3.1.3 The Simulation IDE	36
3.1.4 Network Simulation Frameworks	38
3.2 The Component Model	39
3.2.1 Overview	39
3.2.2 The NED Language	40
3.2.3 IDE Support for NED	42
3.3 Programming	42
3.3.1 Modules, messages and events	42
3.3.2 Simulation Time	43
3.3.3 Library Classes	44
3.3.4 Ownership Tracking	44
3.3.5 Representing Network Packets	45
3.3.6 The Message Compiler	45
3.3.7 Control Info	46
3.3.8 Wired Packet Transmission	46
3.3.9 Wireless Packet Transmission	46
3.3.10 Signals	47
3.3.11 Random Number Architecture	48
3.3.12 Emulation, Distributed Simulation, Co-simulation	49
3.4 Running Simulations	50
3.4.1 Building Simulation Models	50
3.4.2 Simulation Programs	51
3.4.3 Configuration	51
3.4.4 Parameter Studies	51
3.4.5 Running Batches	52
3.4.6 Animation	53
3.4.7 Debugging and Visualization	55
3.5 Result Collection and Analysis	56
3.5.1 Result Collection and Recording	56
3.5.2 Result Files	57
3.5.3 Visualization using the Simulation IDE	58
4. IKR Simulation Library	61
4.1 Introduction	61
4.2 Architecture and Conceptual Structure	62
4.2.1 Basic Concepts	63
4.2.2 Modeling Concepts	63
4.2.3 Standard Components	64
4.2.4 Simple Simulation Model	64
4.3 Extensions	65
4.3.1 TCP Library	65

4.3.2	Emulation Library	65
4.4	Editions	66
4.4.1	C++ Edition	66
4.4.2	Java Edition	66
4.5	Application	67
4.6	Summary	68
5.	Open WNS	69
5.1	Introduction	69
5.2	The Simulation Platform	70
5.2.1	Event Scheduler	70
5.2.2	Random Distributions	71
5.2.3	Configuration	71
5.2.4	Evaluation	71
5.3	Simulation Framework	72
5.3.1	Simulation Model	72
5.3.2	Node-Component Model	72
5.3.3	Layer Development Kit	73
5.4	Simulation Modules	74
5.4.1	RISE - Radio Interference Simulation Engine	74
5.4.2	IEEE 802.11 WLAN	76
5.4.3	IEEE 802.16 WiMAX	78
5.4.4	TCP/IP Module	78
5.4.5	Traffic Models	79
5.5	Cluster Computing Support	80
6.	From Simulations to Deployments	83
6.1	Introduction	83
6.1.1	A Protocol or Distributed System Coming to Life	83
6.1.2	Bridging the Gap between Simulation and Deployment	84
6.1.3	Chapter Overview	86
6.2	Design Concepts	86
6.2.1	Interfaces to System Resources	86
6.2.2	Runtime Execution Model	88
6.2.3	Programming Language Adaptation	89
6.3	Integration Frameworks	90
6.3.1	Classification Criteria	91
6.3.2	Exemplary Frameworks	92
6.3.3	Comparison of Approaches	95
6.4	Use Case Examples	96
6.5	Conclusion	97

7. Tools and Modeling Approaches for Simulating Hardware and Systems	99
7.1 Introduction	99
7.1.1 Need for System Models	99
7.2 Approaches for System Modeling next to Simulation	101
7.3 ISS based Techniques	102
7.3.1 Pipeline Principle	103
7.3.2 Cycle Accurate ISS	104
7.3.3 Instruction Accurate ISS	105
7.4 Time Based Annotations	107
7.4.1 Simulation Instrumentation	108
7.4.2 HySim	112
7.4.3 VPU	114
7.5 Comparison	117
8. Parallel Discrete Event Simulation	119
8.1 Introduction	119
8.1.1 Why do we need Parallel Discrete Event Simulation? ..	119
8.1.2 Challenges of Parallel Discrete Event Simulation	120
8.2 Parallel Simulation Architecture	121
8.2.1 Conservative Synchronization Algorithms	122
8.2.2 Optimistic Synchronization Algorithms	125
8.3 Parallelization in Practice	127
8.3.1 OMNeT++	127
8.3.2 ns-2	127
8.3.3 DSIM	128
8.3.4 JiST	128
8.3.5 IKR SimLib	129
8.4 Conclusion	129

Part II. Lower Layer Wireless Modeling

9. Physical Layer Modeling	133
9.1 Overview of the PHY Layer	133
9.2 Description of the Main Components of the PHY Layer	138
9.2.1 Components of the Bit Domain	138
9.2.2 Components of the Symbol Domain	143
9.2.3 Components of the Sample and Waveform Domain ...	150
9.3 Accurate Simulation of Physical Layers	152
9.4 Physical Layer Modeling for Network Simulations	155
9.4.1 Link-to-System Interface	156
9.4.2 Equivalent Channel Quality Models	158
9.4.3 Modeling Advanced Transmission Systems	159
9.5 An Example Packet Domain Physical Layer Simulation Model	162

9.5.1	Radio Unit	162
9.5.2	Evaluation Unit	166
10.	Link Layer Modeling	171
10.1	Medium Access Control (MAC) Protocols	172
10.1.1	Time Domain	172
10.1.2	Frequency Domain	176
10.1.3	Space Domain	178
10.1.4	Code Domain	178
10.1.5	Resource Management	179
10.2	Logical Link Control	183
10.2.1	Forward Error Detection and Correction	183
10.2.2	Backward Error Detection and Correction	184
10.2.3	Queueing and Processing Delay	186
10.3	Summary	187
11.	Channel Modeling	189
11.1	The Physics of Radiation	191
11.1.1	The Nature of Electromagnetic Radiation	191
11.1.2	Propagation Phenomena	195
11.2	Classification of Propagation Models	197
11.3	Deterministic Approaches by Classical Field Theory	198
11.4	Deterministic Geometric Optical Approaches	199
11.4.1	Modeling Phenomena with Geometrical Optics	199
11.4.2	Ray Tracing Algorithms	200
11.5	Empirical Path Loss Approaches	201
11.6	Stochastic Shadowing Models	202
11.7	Stochastic Fading Models	204
11.7.1	Physics of Fading	204
11.7.2	Stochastic Models for Fading	209
11.8	MIMO Channel Models	210
11.8.1	Multiple Antennas for Wireless Systems	211
11.8.2	MIMO Fading Channel Models	211
11.9	Hybrid Approaches	216
11.9.1	The Dominant Path Prediction Model	217
11.9.2	Hybrid Ray-Tracing Models for Indoor and Outdoor Propagation	217
11.10	Noise and Interference	218
11.10.1	Noise	218
11.10.2	Interference	219
11.11	Modeling the Antenna Impact	220
11.12	Implementations of Wireless Channels	224
11.12.1	Channel Parameters used in Standardization - IEEE 802.11	226

11.12.2	Channel Parameters used in Standardization – 3GPP Long Term Evolution	229
11.12.3	Channel Parameters used in Standardization – IEEE 802.16a/e	230
12.	Selected System Models	233
12.1	IEEE 802.11 (WLAN)	233
12.1.1	System Reference Model	234
12.1.2	Physical Layer	235
12.1.3	Logical Link Control (LLC)/Medium Access Control (MAC)	241
12.1.4	Introduction of Available Models	245
12.2	IEEE 802.16 (WMAN)	263
12.2.1	System Reference Model	264
12.2.2	Physical Layer	265
12.2.3	Medium Access Control	265
12.2.4	OFDMA Frame Structure	268
12.2.5	Important Parameters	271
12.2.6	Selected Models	271
12.3	IEEE 802.15.4	274
12.3.1	Technical Introduction	275
12.3.2	IEEE 802.15.4 Reference Model	277
12.3.3	Physical Layer	279
12.3.4	Medium Access Control Layer	285
12.3.5	Important Parameters	291
12.3.6	Introduction of Available Models	292
12.3.7	Summary	301
13.	Wireless Networking Use Cases	303
13.1	Use Case - Coexistence	303
13.1.1	Regulatory Constraints	304
13.1.2	Performance Measures	306
13.1.3	Simulation Setup	308
13.1.4	Model	309
13.1.5	Tips	313
13.1.6	Conclusion	315
13.2	IEEE 802.15.4 Performance Analysis	315
13.2.1	Goal of the Analysis	316
13.2.2	Metrics for the Analysis	316
13.2.3	Used Parameters	317
13.2.4	Modeling the System	317
13.2.5	Reference Scenarios	319
13.2.6	Simulation and Evaluation	319
13.2.7	Summary	322

14. Modeling Mobility	325
14.1 Introduction	325
14.2 Categorization of Mobility Models	326
14.2.1 Traces and Synthetic Mobility Models	326
14.2.2 Entity and Group Mobility Models	326
14.2.3 Human, Animal, and Vehicle Mobility Models	327
14.2.4 Normal Situation and Special Situation Mobility Models	327
14.2.5 Other Mobility Models	328
14.3 Mobility Models	329
14.3.1 Random Walk Model	329
14.3.2 Random Waypoint Model	330
14.3.3 Random Direction Model	331
14.3.4 Gauss-Markov Model	332
14.3.5 Manhattan Model	333
14.3.6 Column Model	334
14.3.7 Pursue Model	335
14.3.8 Nomadic Community Model	335
14.4 Selection of Appropriate Mobility Models	336
14.5 Conclusions	337
15. Modeling Handover from the Access Networks' Perspective	339
15.1 Introduction	339
15.2 Methodology	340
15.2.1 Taxonomy for Modeling Handovers	340
15.2.2 Wireless System View	343
15.3 Application Examples	346
15.3.1 Handover in an IEEE 802.11 Multi-cell Environment	346
15.3.2 Cost function for an IEEE 802.11a/g System	350
15.4 A Guide for Modeling Handover Approaches	352
15.4.1 Problem Formulation	353
15.4.2 Classification	354
15.4.3 Focus of Studies	354
15.4.4 Level of Detail	354

Part III. Higher Layer Modeling

16. Modeling the Network Layer and Routing Protocols	357
16.1 Introduction	357
16.2 Routing	357
16.2.1 Classification and Examples	358
16.2.2 Components of a Routing Protocol	360
16.2.3 Theoretical Background	364
16.2.4 Metrics	367
16.2.5 Virtual Routing on Overlays	369

16.2.6	Influence from Other Models	371
16.3	Internet Mobility	372
16.3.1	Aspects of Mobile IP & Protocol Enhancements	374
16.3.2	Performance Metrics	377
16.3.3	Evaluation Model	378
16.4	Conclusion	381
17.	Modeling Transport Layer Protocols	383
17.1	Introduction	383
17.2	Existing Simulation Models	384
17.3	Using Real Implementations in Simulators	386
17.4	Transport Layer Traces	386
17.5	Analytical Performance Modeling	387
17.5.1	Inverse Square-root Law for TCP Throughput	388
17.5.2	A Model for TCP Congestion Control	390
17.6	Fluid Models and Integration with Packet-level Simulation	391
17.6.1	TCP Fluid Models	391
17.6.2	Integration with Packet-level Simulations	391
17.7	Conclusion	393
18.	Modeling Application Traffic	395
18.1	Introduction	395
18.2	Modeling HTTP Traffic	396
18.2.1	Survey of HTTP Traffic Models	397
18.2.2	Parametrization	403
18.3	Modeling FTP Traffic	404
18.3.1	User Level Modeling	408
18.3.2	Object Level Modeling	408
18.3.3	Packet Level Modeling	409
18.3.4	Discussion	409
18.4	Modeling Voice Traffic	409
18.4.1	Entities of an Application for Voice Transmission	410
18.4.2	Speaker Models	412
18.4.3	Codec Models	416
18.5	Modeling Video Traffic	417
18.5.1	Entities of an Application for Video Transmission	417
18.5.2	User Models	418
18.5.3	Codec Models	419
18.6	Conclusion	424
19.	Modeling the Internet Delay Space and its Application in Large Scale P2P Simulations	425
19.1	Introduction	425
19.2	End-to-end Delay and Its Phenomena	426
19.3	Existing Models in Literature	428

19.4	Data from two Internet Measurement Projects	429
19.5	Model	431
19.5.1	Overview	431
19.5.2	Part I: Embedding CAIDA hosts into the Euclidean Space	432
19.5.3	Part II: Calculation of Jitter	434
19.5.4	Algorithm and Memory Overhead	435
19.6	Evaluation	436
19.6.1	Experimental Setup	436
19.6.2	Metrics	438
19.6.3	Analysis with Measured CAIDA data	439
19.6.4	Comparison to Existing Models	439
19.7	Summary	443
20.	Modeling User Behavior in P2P Systems	445
20.1	Introduction	445
20.2	System Model	446
20.3	Modeling Churn	447
20.3.1	Lifetime Models	448
20.3.2	Session Models	449
20.4	Workload Model	451
20.5	User Properties Model	451
20.6	Use Case: Kademia	452
20.7	Evaluation	454
20.7.1	Methodology	454
20.7.2	Setup 1: Fixed Network Size, Variable Session Models	455
20.7.3	Setup 2: Fixed Session Duration, Variable Intersession Duration	456
20.7.4	Setup 3: Fixed Network Size, Variable Event Rate	456
20.7.5	Setup 4: Variable Arrival Processes	458
20.8	Further Reading	458
20.9	Conclusions	459
21.	Modeling Security Aspects of Network	461
21.1	Introduction	461
21.2	Role of Modeling and Simulation in Security Research	462
21.2.1	Security Models	462
21.3	Evaluation Metrics	464
21.3.1	Normal System Operation	464
21.3.2	System under Attack	465
21.3.3	System under Attack with Activated Security Measures	465
21.4	Discussion	466
21.5	Summary	467

22. Modeling the Network Topology	469
22.1 Introduction	469
22.2 Abstraction of Network Topologies by Graphs	470
22.3 Characterizing Graphs	471
22.4 Common Topology Models	474
22.4.1 Random Graphs	474
22.4.2 Geometric Random Graphs – The Waxman Model	476
22.4.3 Hierarchical Topologies	476
22.4.4 Preferential Linking – The Barabási-Albert Model	476
22.4.5 Intermediate Results	477
22.5 Modeling the Internet	478
22.5.1 Background	478
22.5.2 Topology Inference & Data Sources	478
22.5.3 On Internet Topology Properties	480
22.5.4 Topology Generation	482
22.6 Conclusion	483
List of Figures	485
List of Tables	489
List of Acronyms	491
List of Authors	497
References	499
